

BERNINA embroidery software V5 - Service Pack 1

Subject:

BERNINA Embroidery Software V5 - Service Pack 1 (V5.0R)

- **V5.0J** (only English)
- **V5.0P** (German and English)

Release Notes - V5R:

Short description	Error in the previous release. This Problem has been rectified in the SP1.
Changes in the program	
Application start-up time	The start-up time of the program has been decreased.
Magic Box loading problems under Windows Vista	When you first load the Magic Box interface under Windows Vista, it loads and can be used. However, when subsequently attempting to load the interface, nothing happens.
Empty Color Film in Display Setup > Screen Calibration	The Color Film becomes empty after changing values in Display Setup > Screen Calibration .
Opening V4 ART files	When opening certain ART designs created in BERNINA artista Designer V4, an error message appears saying that the file appears to be damaged even though there is no error message and no problem opening the file in BERNINA artista Designer V4.
Changes in Color- and Thread table	
RGB values in packaged Isacord 40 wt-shaded thread char	The packaged 'Isacord 40 wt-shaded' thread chart uses the wrong RGB values.
Color jumps when selecting thread chart colors	When selecting a thread chart color by left-clicking, the cursor jumps to another color further down the thread chart under Vista (not Windows XP).
Threads colors of pattern run outlines	The thread color of a pattern run outline sometimes changes color when a new pattern is applied.
Overlapping buttons in Thread Colors dialog (German Language)	The Drucken (Print) command button is overlapped by the Erstellen/Modifizieren (Create/Modify) command in the Thread Colors dialog in the German version of the software.
Underlay in Auto Digitizer or Magic Wand designs	Designs created with Auto Digitizer or Magic Wand now includes underlays.
Changes in Hooping	
Hooping in Cross Stitch	When you change the hoop via Settings > Options in Cross Stitch, it does not change the hoop on screen.

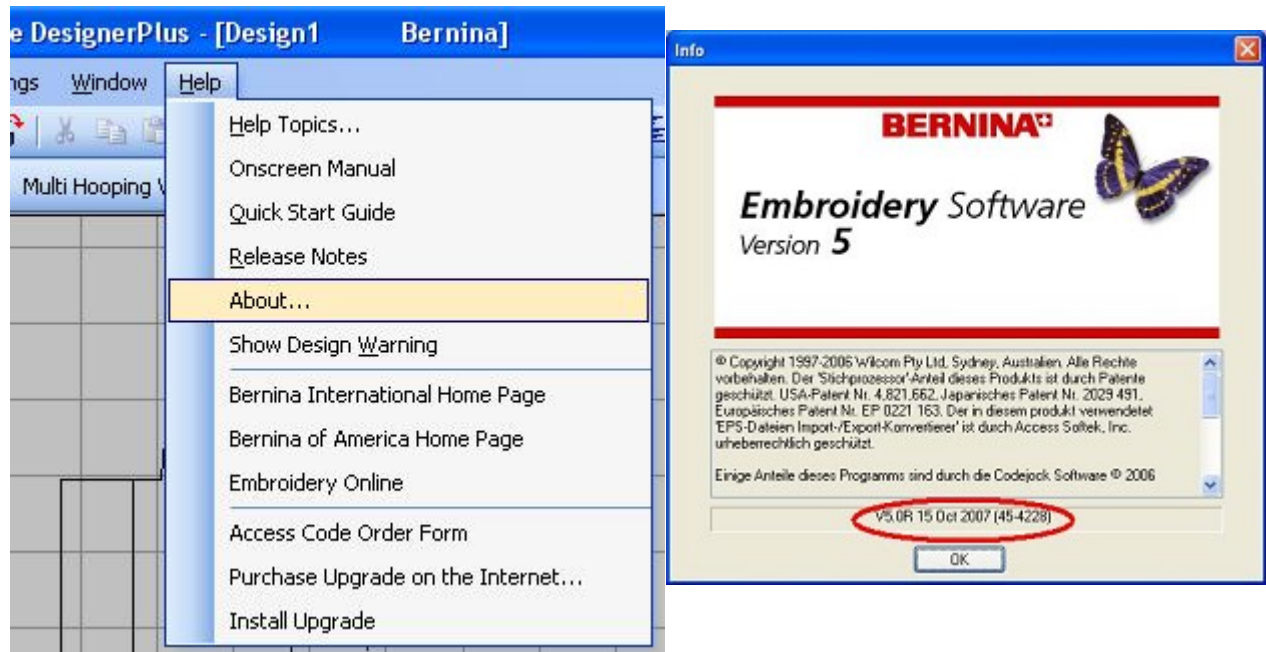

<i>Short description</i>	<i>Error in the previous release. This Problem has been rectified in the SP1.</i>
Sending out-of-hoop designs under German language O/S	When you attempt to send a design to machine which is placed slightly outside the hoop area, nothing happens.
User-friendly multi-hooping behaviour	When you have a design that is larger than the currently selected hoop and you click on send to machine, the software correctly advises that not all objects will be stitched. It then displays just those stitches that will be stitched for the currently selected hoop. This leads some users to believing that the design has been modified as all they see are the stitches that will be stitched in the design window and nothing else. The modified procedure prompts the user with options for sending the design to the machine making it clearer what will be sent.
<i>Changes in Lettering</i>	
Hangs/crashes with some TrueType fonts	Bernina software hangs when certain TrueType fonts are used.
RGB values for Code 1180 in Sulky thread chart	RGB values for Code 1180, Description: med.taupe, in Sulky thread chart are wrong.
Stitch generation with Letter 'k' in TrueType Times New Roman font	When you use the letter 'k' from the TrueType Times New Roman font, it fails to generate stitches in part of the letter, making it look like a lower case L.
Editing lettering objects with pre-defined baselines	When you edit a lettering object created with a pre-defined baseline, the baseline with which the first and third lines of the object was created is lost, giving you a straight baseline.
Pull compensation with Appliqué Varsity Caps	Some letters of Appliqué Varsity Caps have pull compensation activated, others don't.
Zingers with letter 'A' of Varsity Appliqué alphabet	A zinger occurs when lettering which contains the letter 'A' is created using Varsity Appliqué alphabet.
<i>Changes in Monogramming</i>	
Color dropdowns in the Monogram dialog tabs	Color dropdowns in the Monogram dialog tabs are not updated properly when switching between designs with different color palettes.
Updated text fields in Monogramming dialog	Changes made in text fields of the Monogramming dialog are not applied when the OK button is clicked.
<i>Language support</i>	
Save dialog confirmation appears in English under a German Locale	When you create a design or change and close a design that has not already been saved, the confirmation message to save the design appears in English even on a German system.

Bernina V5.0 In-field update installation note:

The Bernina embroidery Software V5.0 SP1 can **only** be installed to the following existing systems:

- **BERNINA embroidery software V5.0J**
- **BERNINA embroidery software V5.0P**

This particular information will be found in the BERNINA embroidery software under **Help - Info about**

1. It searches for the currently installed Bernina V5.0 product.
If the installation cannot find one of the supported versions of the software, it will display an error message.
2. Existing files will be replaced or added with files from the Service Pack when a Bernina embroidery software V5.0 product will be detected.

A detailed installation manual can be found in the download section of the Information. *Warning:* Installing this service pack with ANY other version of Bernina software may cause unknown problems and the software may not work correctly
