

Binder Attachment #88

Custom-fit the BERNINA Binder Attachment #88 to your machine to get precisely stitched binding to finish the edges of your projects. Make the adjustments shown as needed the first time you use the binder for best results. Occasional adjustments may be needed as the moving parts of the binder may shift slightly with use.

2 Loosen screws using a screwdriver to slide the guide side-to-side; should be adjusted to fit against the side of the presser foot after the attachment is in place.

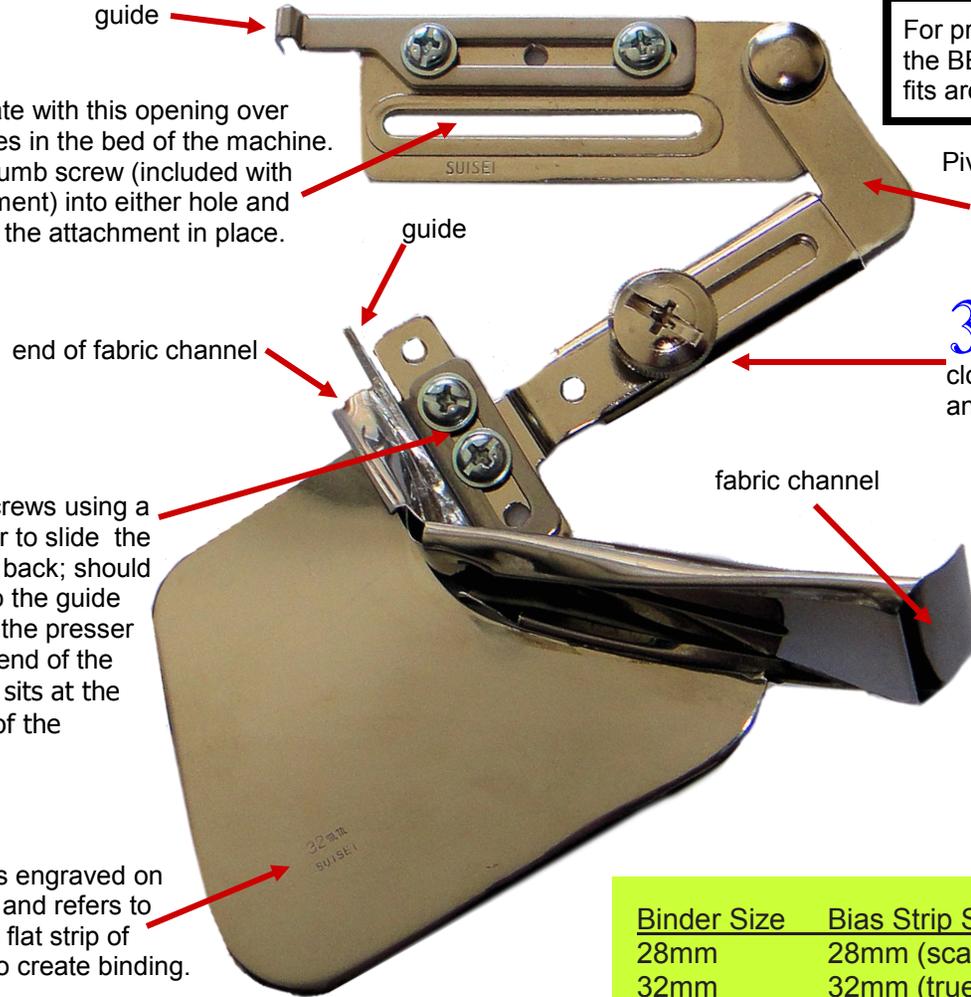

1 Position plate with this opening over the two holes in the bed of the machine. Insert black thumb screw (included with Binder Attachment) into either hole and tighten to hold the attachment in place.

For precision binding, make adjustments to the BERNINA Binder Attachment so that it fits around Binder Foot 95/95C.

Pivot arm has several purposes:

- Swing it out for more room when attaching binder to machine.
- Easier to load fabric strips into binder in the swing-out position.
- Used in the process of mitering corners using binder attachment.

3 Loosen screw using a screwdriver to slide the binder side-to-side to adjust the front part of the attachment. The binder should be set close to the presser foot with just enough clearance so that the foot and the binder do not interfere with each other.

4 Loosen screws using a screwdriver to slide the binder front to back; should be adjusted so the guide sits parallel to the presser foot while the end of the fabric channel sits at the tip of the toe of the presser foot.

Size of binder is engraved on the attachment and refers to the width of the flat strip of fabric needed to create binding.

Binder Foot #95/95C

Binder Foot #95 works with BERNINA models that have a maximum stitch width of 5.5mm. The notch on the side of the foot allows the binder to fit against the foot.

Binder Foot #95C works with models that have a maximum stitch width of 9mm. The right side of the foot is narrower than Reverse Pattern Foot #1, which allows the binder to fit against the foot.

Binder Size	Bias Strip Size	Final Binding
28mm	28mm (scant 1 $\frac{1}{8}$ ")	7mm (1 $\frac{1}{4}$ ")
32mm	32mm (true 1 $\frac{1}{4}$ ")	8mm (5 $\frac{1}{16}$ ")
38mm	38mm (scant 1 $\frac{1}{2}$ ")	11mm (7 $\frac{1}{16}$ ")
